

## Adição do botão *Close*

index.html x folhadeestilo.css x

```
40 .modalDialog.target {
41   display: block;
42   opacity: 1;
43   pointer-events: auto;
44 }
45
46 .modalDialog div{
47   width: 500px;
48   position: relative;
49   margin: 10% auto;
50   padding: 5px 20px 13px 20px;
51   -webkit-border-radius: 12px;
52   -moz-border-radius: 12px;
53   border-radius: 10px;
54   background-color: #fff;
55 }
56
57 .modalDialog p {
58   margin-top: 5%;
59   margin-bottom: 5%;
60 }
61
62 .modalDialog img {
63   width: 50%;
64   position: relative;
65   margin-left: 25%;
66 }
```

Lembra-se da tag `<a>` que inserimos em cada um dos *pop-ups*? Nesse caso, o ID `#close` é a chave para que a *div* com a class `modalDialog` fique invisível novamente.

```
40 .modalDialog:target {
41   display: block;
42   opacity: 1;
43   pointer-events: auto;
44 }
45
46 .modalDialog div{
47   width: 500px;
48   position: relative;
49   margin: 10% auto;
50   padding: 5px 20px 13px 20px;
51   -webkit-border-radius: 12px;
52   -moz-border-radius: 12px;
53   border-radius: 10px;
54   background-color: #fff;
55 }
56
57 .modalDialog p {
58   margin-top: 5%;
59   margin-bottom: 5%;
60 }
61
62 .modalDialog img {
63   width: 50%;
64   position: relative;
65   margin-left: 25%;
66 }
```

Em outras palavras, quando clicarmos na tag `<a>` com ID `#close`, o estado `:target` da div com a class `modalDialog` será removido.

Isso irá forçar a div a voltar para o estado inicial em que as propriedades `opacity 0` e `display none` estão trabalhando para que o elemento fique invisível.

61
62 .modalDialog img {
63   width: 50%;
64   position: relative;
65   margin-left: 25%;
66 }
```

Também adicionamos a *class close* na tag `<a>`. Isso nos permitirá formatar o botão fechar do *pop-up*.

Assim como na formatação da *div*, também indicamos ao navegador como ele deve renderizar a borda do elemento.
